ABOUT CENTURYPLY

CenturyPly, the name that is the talk of the industry. A leader in varied plywood, decorative laminates and veneers, CenturyPly is a definite ruler in the Indian market. With a never-die attitude and customer satisfaction as the ultimate goal, CenturyPly is constantly researching, innovating and evolving its products to bring the best to its customers.

In 1986, two pioneering visionaries Mr. Sajjan Bhajanka and Mr. Sanjay Agarwal laid the foundation of Century Plyboards (India) Ltd. (CPIL), that is today generating millions in turnover and many more millions of satisfied customers in beautiful homes.

CenturyPly is the first choice of architects and interior designers – strongly recommending them to home makers across the country. Helping them transform mundane structures to pieces of beauty and comfort. As a brand that the world aspires to, we at CenturyPly believe in forging our way ahead through perseverance and determination. No wonder, every place we touch is transformed.

CENTURYEXTERIA AN OVERVIEW

The world of CenturyExteria is the world of exterior grade, designer high pressure laminates that make the outside of any building, home or office, look as beautiful as the inside.

CenturyExteria promises the absolute best of exterior solutions in a wide array of designer shades, patterns and solids.

Exterior facades have a phenomenal impact on long term life and performance of a building. They directly influence the room and building temperature, impacting and lowering the energy use for cooling systems.

These uber cladding solutions from CenturyExteria are a definite mix of functionality, design optimization, and aesthetics. CenturyPly's own local manufacturing facility in India ensures that we have a strong logistic support ensuring that we unfailingly meet the project deadlines. Meant to create a lasting impression, CenturyExteria drapes building facades with both style and substance.

SALIENT FEATURES

*Conditions apply

Ventilated Facade System

CenturyExteria panel cladding is a ventilated facade system that eliminates moisture problems due to internal condensation of water, ensuring an improved comfort for indoors. The drainage of rainwater, entering through the ventilation gaps between panels, is carried out through ventilation outlets. Another major benefit of CenturyExteria cladded walls is that they reduce the mechanical stress in the main structure; hence it is the most feasible solution for rehabilitation of aging building exteriors.

Fire Safety

CenturyExteria panels are having the property to reduce the fire spread intensity when it is exposed to fire and retain their stability for a long time. This has been tested and approved by authorised testing bodies in India and abroad. The CenturyExteria product falls within one of the most authentic fire retardant class ratings (Class - I), as per BS 476 Part#7. This product has also secured class - A rating as per ASTM E84 – 13a Std., with a F.S.I. value as 15 & S.D.I. as 350.

Tough

The suitable modulus of elasticity, high tensile and flexural strength make CenturyExteria panels highly impact resistant. The homogeneity in the composition and density of the core ensures high pull-out strength for fixings or fasteners, which is especially important when the panel is invisibly fixed with anchors. Not only this, the dimensional stability and workability of CenturyExteria panels are comparable to those of hardwood. These can be easily processed, cut, sized, drilled and perforated. These are also not affected by moisture and are not susceptible to weathering or rot.

Temperature Resistance

The CenturyExteria panel can withstand temperatures ranging from -20°C to +80°C, making it the most suitable exterior cladding option for any kind of climatic condition, whether it be chilling frosty weather or scorching heat.

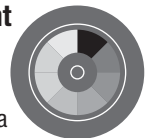

Weather Protection

The specially designed weather-proof acrylic film on both sides of the panels are invincible against heavy rains, storms, harsh sunlight, scarring dusts and ensures indomitable protection against UV rays.

Colour Stability - Optimal Light Fastness

Colour stability of the vertically applied decorative surface of CenturyExteria panels comply with the highest score classification - 5 measured with the grey scale according to EN 438 - 6. The colours of CenturyExteria panels would have a very minimal effect (almost no considerable shade fading) in the most severe climatic conditions, under direct contact of UV rays and even in heavily polluted industrial locations.

Acoustic Resistance

CenturyExteria panels have ventilated facade systems, which tend to influence the function of external noise reflection and behave as a sound insulating system (due to a high level of acoustic resistance of CenturyExteria panels), providing a considerable reduction in noise levels in commercial or institutional spaces like hospitals, office buildings, hotels and schools located in heavy traffic areas.

Thermal Insulation

Ventilated facade systems by CenturyExteria panels ensure natural ventilation and reduce the amount of heat that buildings absorb in hot weather. This helps in achieving a considerable reduction in air conditioning costs in summers, thereby proving to be an ideal exterior cladding solution with an attractively low payback period.

Roof cladding

Louvre

Highlighter

Gate cladding

ARRAY OF APPLICATIONS

Just like our sense of fashion reflects our taste, building facades too are an expression of individual style. CenturyExteria has various kinds of usage, only a few are mentioned below:

- Ventilated facade
- Fence, rail & screen
- Pedestrian shelter
- Duct covering
- Awning
- Partition
- Signage
- Lettering
- Kiosk
- Prefab hut
- Canopy
- Gate cladding
- Highlighter
- Louvre
- Roof cladding
- Soffit
- Balcony cladding
- Sliding shutter
- Parapet

STORAGE & HANDLING

- Store in a dry, clean, frost-free room.
- CenturyExteria HPL sheets must be stacked horizontally.
- A levelled surface which provides full and uniform support to the pallets on which CenturyExteria HPL sheets are placed during storage, should be made available.
- Dirt, dust or any abrasive material in any form must always be avoided on or between CenturyExteria HPL sheets.
- Keep CenturyExteria HPL sheets in the original, closed packaging where possible.
- Do not place any moisture-sensitive separator layers between the CenturyExteria HPL sheets. If required, use plastic sheets as intermediate layer.
- Treat CenturyExteria HPL sheets with care. Suitable protective hand gloves must always be worn while handling.
- CenturyExteria HPL sheets should not be slid over another or pushed/pulled over edge while they are being carried or loaded. During transportation always lift the sheets.
- The peel off film should be ideally removed within 14 days of installation of the panels.

CARE AND MAINTENANCE

- CenturyExteria HPL panel surfaces can be cleaned with a damp cloth and mild detergent (baby shampoos, liquid dish washing detergents, liquid soaps etc.). After cleaning, a thorough rinsing and drying is required.
- Any kind of abrasive cleaner, powder, scouring pad, steel wool, chisel, sandpaper, brush having hard rigid bristles etc. should never be used; this can leave permanent scratch marks on the laminate and irreversibly damage the finish.
- Don't use any strongly acidic or alkaline based solvent, bleach, heavily chlorinated product or furniture polish as cleaning agent; these agents can discolour the UV protective film on the panel.
- Any solvents having polyurethane lacquer, paint thinner and nail polish remover must not be used, as these solvents can have adverse effects on the UV protective film.

Note: Any kind of improper or incorrectly performed cleaning will make the warranty void.
